Garnet Hill

Women's Foot Size Chart

The key to determining the right shoe size is to measure both feet. Print and use our foot size chart to accurately order the shoes and boots in our fashion-forward collection. Follow the instructions below to take the guesswork out of size selection and ensure a comfortable fit right from the start.

Measuring Your Foot:

1. **IMPORTANT:** Before measuring foot, please place a ruler against the bar on the left side of this page and verify that the chart has printed correctly. From top to bottom of the line on left, the measurement should be 10 inches. If the calibrations do not match, please make sure you are following the printing directions correctly.
2. Measure foot by placing the heel on size chart as indicated. Please measure both feet and use the larger foot as the indicator of shoe size. The size closest to the longest toe equals the appropriate shoe size.
3. Specific fit information may be found on the product page.

Fold page on this line and place at wall, then place heel against wall.
